Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese Publication no. 10238578 to Toyo Tire & Rubber (as cited by applicant and herein referred to as Toyo) in view of Ando (US patent no. 5,056,975). Toyo discloses a power unit mount structure for a vehicle, comprising: a first mounting member (11, figure 3) for attachment to a power unit; a second mounting member (8, figure 3) for attachment to a vehicle body, the second mounting member having a flange (flange with holes 9, figure 2) for abutment with the vehicle body, the flange having two attachment holes (9) for the passage therethrough of two screws to secure the flange to the vehicle body, the two holes (9) being disposed in diametrically opposed relation with each other about a center of the second mounting member; an elastic connecting member (3, figure 3) elastically connecting the first and second mounting members.

However, Toyo does not disclose three spaced projections about the flange. Ando teaches providing three spaced projections (23) circumferentially located about a flange (washer 20) to prevent the flange from slipping (col. 2, lines 55-57) on the surface to which it is mounted. It would have been obvious to one of ordinary skill in the art to have provided the flange of Toyo with three projections to prevent the flange from

slipping from the surface as taught by Ando. Further, it would have been an obvious matter of mechanical expedient to place the projections offset from the line define between the holes.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The remaining cited art of record further demonstrate projections in washers.
